Andrew,

I added new text for the Pontel et al. (2015) paper in ADME and GeneTox if few places. I marked this text with the bubbles saying new text. Let me know if you want me to add this text directly to the document on Sharepoint, in which case let me know which file exactly. Here, I am attaching a word file where it I cut the TK and GenTox portions cut out separately.

Sury

Cool, sounds like an easy change of ADH3 to ADH5 in the draft.

Hi Andrew,

I looked at the Pontel study. They talk about having increased mono adducts in Adh5-/- and Fancd2-/- double knockout mice. It fits more into the GeneTox rather than ADME. Let me know.

No rush, Sury, and I agree that it will not make that much of a difference. Within the next few weeks (by Thanksgiving) or so?

Yes, Andrew. I will revise. It can go into ADME, but in to the summary, need to check if that makes that much difference. What is the time frame you are looking? Let me know the next steps so that I will plan accordingly.

Thanks Sury, are you planning to revise the ADME section and TK summary in the main draft at all (e.g., to revise discussion of ADH5 vs. ADH3)?

Hey Jason and Sury,

I cannot remember if we circulated this manuscript.

Enjoy!
